PROFILE

Dedicated engineer with a strong foundation in rotating machinery and industrial systems. Currently finalizing doctoral research in predictive maintenance, specializing in AI-driven fault detection and signal processing. Proven ability to translate complex data models into actionable maintenance strategies that minimize downtime and optimize operational costs. Seeking to leverage advanced diagnostic expertise to improve asset reliability in a high-paced industrial environment.

EXPERIENCE

Teaching Assistant | Larbi Ben M'hidi University

[2024 - 2025]

Research Intern | CDIF Laboratory, Universitat Politècnica de Catalunya (UPC), Spain

[21/11/2024 - 26/12/2024]

- Conducted high-level analysis of experimental plate crack data using advanced signal processing (e.g., FFT, Wavelets) and Machine Learning algorithms.
- Developed automated models to identify structural integrity issues, reducing the manual effort required for complex industrial diagnostics.

Maintenance Intern | Technology Hall, USTHB, Algeria

[10/05/2021 - 12/06/2021]

- Diagnosed complex mechanical and electrical defects in Shaper Machines, ensuring 100% operational reliability.

Tools

MATLAB & SIMULINK.
Python.
FastAPI
Docker
Supabase
Microsoft Office.
LaTeX.

EDUCATION

Ph.D. In Industrial Maintenance

University Larbi Ben M'hidi, Oum El Bouaghi - Algeria

Industrial Maintenance Engineer

2020/2022

University of Science and Technology Houari Boumediene (USTHB) - Algeria

Ba In Maintenance Of Means Of Transport

2017/2020

University of the Mantouri Brothers Constantine 1 - Algeria
